AVSScript is the standard way of building 3D engines in Avisynth. With its flexibility, Avisynth is the perfect instrument for building efficient and high quality 3D content. In addition to its simple, yet powerful scripting language, the most important aspects to Avisynth are its high performance, high end hardware support and the free and open source source code available. Avisynth is a powerful, easy to use and totally modular program, in which you can easily take advantage of all its functionality. It is designed to be extended, and many people have contributed to the project by creating plugins to make every part of it easier to use. The speed and the power of Avisynth are directly related to the number of plugins available. Avisynth, in its core, is written in C++ and the addition of plugins requires for developers to be good C++ programmers, while providing a certain amount of glue code to make the plugins interact with the core. File Formats: AVS Script is a simple text file, with the '.asx' extension. This is similar to programming languages, like C++, where each component is a line of code, and the whole file is an "executable" or "application". 2017-10-16 1.0.1 Update of AVSScript Avisynth®Script is a popular framework for authoring interactive 3D animations in the Avisynth® environment. It is available for Linux, Mac and Windows and has the ability to export to formats supported by the Windows operating system, including.avi,.mpg,.mov and.mkv (maximum quality) and supports hardware acceleration for multiple platforms and GPUs, including the OpenGL® rendering system. The AvisynthScript standard has come a long way in the past ten years since its inception. It has become the tool of choice for many in the 3D animation industry and is widely accepted as being the "gold standard" for authoring interactive 3D animations. *AVS Script is a free and open source application.* 2017-09-27 1.0.0 Update of AVSScript Avisynth®Script is a popular framework for authoring interactive 3D animations in the Avisynth® environment. What's New In?

AVS is an important tool for film composers as it allows users to create their own visual effects. However, many other editors (from a basic slideshow to advanced compositing programs like Final Cut Pro or Avid) are not designed to work with a compiler like AVS. As such, many users struggle with the intricacies of AVS and never understand exactly how to code in it to create their effects. AvisynthEditor is specifically designed for users who wish to learn how to code with AVS and/or audio/video editors but never have the time to invest in learning the language. The way it works: 1. It works on the same principals as an audio/video editor. It lets the user cut/copy/paste/trim sections of audio and video. 2. AVS is written in C++ and written with C++-like programming principals. Therefore, you won't find yourself struggling to find a function. Even more importantly, Avisynth is written very cleanly and its C++-like code is easily understandable. 3. AvisynthEditor is specifically coded to work with AVS so that users know how to use the editor the exact way a programmer writes. Of course, the user interface is made simple and is intended for computer users and programmers alike. Basic Sample Scripts: Avisynth Editor does not include any sample scripts but you can find them here: AVS Scripting: Basic Avisynth Editor features: Cut, Copy, Paste, Trim, Effect 1, Effect 2, 3, 4 (adding a dialogue scene), Watermark, Overlay, Greyscale, Set Frame, Redraw, Preview Pre-Properties: Animate Button, HD Video Button, HD Audio Button, Init Button, Rerender Button, Audio, Video, Interlace Button, Convert Button Basic Avisynth Editor Features: 2 Effects (Add and Remove), Watermark, Advanced Slideshow Styles, Advanced Gaussian Blur: RGB, Grayscale, Blur, Red Channel Only, Red Channel plus Green Channel, Red Channel plus Blue Channel, Red Channel plus Blue Channel plus Green Channel, RGB Same Colour, RGB Opaque, RGB Transparent, Rotation, Animate Button, Show Frame, Hide Frame, Hide All Frames Advanced Effects: Stipple, 3D Conv
